TECHNICAL DATA SHEET

CARRYING CHANNEL

Our carrying channels meet Canadian steel standards established by CSSBI (Canadian Institute of Sheet Steel Building) ASTM-C645.

They are available in two standard widths: 3/4" and 1 1/2" and are manufactured only in lengths of 12'; see dimensions below:

The carrying channels are used to strengthen the wind resistance of a wall.

They can be used for interior or exterior applications.

Galvanizing used for the components is described in the CSSBI Technical Bulletin of February 2006, G60 (Z-180) for all thicknesses. Also available in G90 (Z-275).
